<b>Office Action Summary</b>	<b>Application No.</b> 10/717,666	<b>Applicant(s)</b> SHIN, DONG HOON	
	<b>Examiner</b> Jason Heckert	<b>Art Unit</b> 1746	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 05 March 2007.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.

## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments with respect to claim 1-3 have been considered but are moot in view of the new ground(s) of rejection.
2. The previous rejection under 35 U.S.C. 103 (a) has been withdrawn.

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 3 rejected under 35 U.S.C. 102(b) as being anticipated by Whipple, III et al. (Whipple). Whipple discloses a dishwashing machine utilizing a control method wherein water is supplied to the machine, circulation begins in the circulation subsystem, and then power consumption surges are detected. The system then utilizes these measured surges to control the water provided (col. 8 lines 40-55). The control system is capable of detecting and recording multiple measurements over discrete time periods (col. 5 line 60 – col. 6 line 15). Comparing these measurements to previous measurements, or predetermined values, the control system determines the proper amount of liquid to be added. Whipple also discloses water introduction is ceased when the power oscillations dampen out, or lessen from the previously recorded measurements, or predetermined values. Whipple also discloses the use of current detection (col. 9 line 24-25).

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 2 rejected under 35 U.S.C. 103(a) as being unpatentable over Whipple in view of Livingston et al. or Kiefer. Whipple discloses monitoring electrical characteristics over time and using such information to control water supply. Whipple does not disclose alerting the user of an error. Error messages in response to problems occurred during process control are known in the art and not considered to be novel, especially if the specific process control is already known in the art. Furthermore, Livingston et al. and Kiefer disclose various means to alert the user of problems, including speakers and displays. It would have been obvious at the time of the invention to modify Whipple and include some sort of error message, as is well known and disclosed by Livingston et al. or Kiefer, to alert the user of the errors in the control scheme.

***Conclusion***
